INTRODUCING NEW IN-HOUSE TRAINING COURSES

Sectra are proud to announce the Sectra Training Facility a new alternative to current training methods and providing you with further flexibility and options for your training.

We are running a variety of CPD accredited courses from our UK headquarters at the The Water Circle in Stansted.

By running these courses at the home of Sectra UK and Ireland, you will have access to the team in a whole new way by meeting our helpdesk and seeing first-hand how our support network functions.

Each course can be tailored to meet your needs and includes accommodation, lunches and dinner.

REGISTER YOUR INTEREST

To register your interest or request additional information regarding Sectra IDS7 training courses, please contact info.uk@spectra.com

COURSE STRUCTURE AND CONTENT

Based on feedback you have given us we have designed the courses to cover three specific areas.

1. Display Protocol Training Course:

This is a 2 day training course.

If your role includes building and maintaining display protocols this is the course for you. This class offers an introduction to how to plan, prepare and create display protocols in IDS7. You will also learn how to use efficient strategies for maintaining and troubleshooting display protocols as your system evolves. The course will give you both the theoretical knowledge as well as hands on practice. Customers are invited to bring their own anonymised data to work on and import the hangings back into their own system on completion.

The Display Protocol training course will include as standard:

- Creating display protocols – including series types and examination types
- Editing existing display protocols
- Importing and exporting display protocols
- Multi modality display protocols – including CR, CT, MR, MG etc.
- Fusion
- Presentation states – including manual presentations and MDT and teaching presentations

COURSE STRUCTURE AND CONTENT CONT.

2. System Administrator Training Course:

This is a 4 day training course.

The system administrator training course includes all IDS7 system administrator functionality with the flexibility of being customer led so that key areas can be covered in detail. The System Administrator training course will include as standard:

- Sectra Enterprise Manager
- IDS7 customisation – including system, role and user configurations
- Display protocols
- Exam administration
- Access control
- Troubleshooting in IDS7
- Export/Import of Images – including non-radiology images (if applicable)

3. Advanced Visualisation Training Course:

This is a 1 day training course per module.

The advanced visualisation modules include the following:

- Breast MRI
- Female pelvis MRI
- Prostate MRI
- CT colon
- CT liver planning

CUSTOMISED ONSITE TRAINING

Although we would love to host you at the Water Circle and introduce you to more of the team, we understand that it is not always possible to travel.

We therefore also offer onsite training days which may be tailored for your requirements. They will take place at a location suitable for you. Arrange the room and we will provide the trainers and learning material.
